EDUCATION

San Jose State University

Bachelor of Science in Data Science, GPA: 3.69

San Jose, CA

Sep. 2023 – Dec. 2025

De Anza College

Associate in Computer Science

Cupertino, CA

Aug. 2022 – Jun. 2023

EXPERIENCE

Data Science Intern

Oct. 2024 – Feb. 2025

Data Glacier

Remote

- Performed Exploratory Data Analysis on multi-table business datasets, cleaning and joining sources to surface drivers of user behavior and revenue; delivered insights via data visualizations and presentation decks.
- Engineered a scalable ingestion and validation pipeline in Python, benchmarking Pandas vs. Dask for performance and enforcing schema validation via YAML to prevent silent data corruption.
- Automated generation of data-quality artifacts (profiling summaries, validation reports, compressed extracts) to standardize downstream reporting and improve reproducibility.

Intern

Dec. 2023 – Feb. 2024

Think Neuro

Remote

- Processed and screened 10,453 research records using R and Microsoft Excel, defining inclusion criteria, filtering citation metadata, and constructing a structured dataset of top-cited publications for bibliometric analysis.
- Developed reproducible analysis workflows and visualizations to surface research patterns and gaps.
- Implemented validation checks and documentation standards to ensure data accuracy across the research pipeline.

PROJECTS

Clinic No-Show Analysis | Python, SQL, Tableau, statsmodels, SciPy

- Analyzed 110,522 medical appointments using Python, SQL, and statistical modeling to identify operational and patient-level drivers of no-show behavior.
- Identified scheduling delay as the strongest no-show predictor, with rates rising from 4.65% for same-day visits to 33.16% for 31 to 90 day delays; validated with chi-square tests and logistic regression.
- Built adjusted logistic regression models showing that longer appointment delays, rather than SMS status alone, explained the higher raw no-show rate among reminder recipients.

California Wildfire Severity Prediction | Python, pandas, GeoPandas, rasterio, pygridMET, py3DEP, xarray, scikit-learn

- Developed a wildfire severity prediction pipeline to analyze pre-fire environmental risk factors and support wildfire preparedness through geospatial machine learning.
- Cleaned and standardized CAL FIRE records for 2,397 wildfires, resolving date, coordinate, acreage, and target-label inconsistencies before rebuilding the project into a point-based environmental feature pipeline.
- Integrated wildfire ignition locations with gridMET weather/fire-danger data, USGS 3DEP terrain, USDM drought intensity, and LANDFIRE vegetation/fuel features to model severity from pre-fire conditions.
- Evaluated multiclass severity and binary high-severity triage models on a 2016–2021 train / 2022–2024 test split, achieving 62.1% balanced accuracy and 0.694 ROC-AUC with a Random Forest model.

Starbucks Marketing Funnel Analysis | Python, pandas, NumPy, Matplotlib/Seaborn

- Reconstructed per-user offer life-cycles by linking portfolio/profile/transcript data and computing funnel KPIs.
- Developed offer attribution logic associating events with active offer windows for reliable conversion measurement.
- Produced segment-level performance cuts by offer type/channel and customer attributes to identify drop-off drivers and recommend a higher-impact promotion mix.

TECHNICAL SKILLS

Languages: Python, R, Java, SQL, C, JavaScript, HTML/CSS

Data Analysis: pandas, NumPy, statistics, machine learning, data modeling, Excel

Databases & ETL: PostgreSQL, MySQL, data cleaning, data transformation, schema validation

Visualization: Tableau, Power BI, Dash, Matplotlib

Tools: Git/GitHub, REST APIs, AWS, GCP, Azure

Additional Information: US Citizen and Selective Service
